

NetStream NMS

The intuitive, easy-to-use LNMS provides a full range of network surveillance, monitoring, configuration and fault management capabilities and gives users complete visibility and control over their NetStream-based network.

NetStream NMS comes in BASIC package, customized to meet the specific needs of Service Providers.

Network Views

Comprehensive network visualization supporting hierarchical views. Zoom in and out to see interdependencies and relationships between NetStream links and other network devices. Equipment locations can be managed according to regions and sectors.

Configuration & Provisioning

Simple and efficient provisioning of NetStream links in the network. Multiple NetStream Manager sessions can be launched by the NetStream NMS to support simultaneous configuration and provisioning of several NetStream links.

Fast Auto Discovery

NetStream NMS automatically discovers NetStream links in the network to create the network structure and enable fast service provisioning.

Link & Site Information

NetStream NMS enables easy drill-down to obtain link and site information on such as operational frequencies, software and hardware versions, delivered services and serial numbers.

Fault Detection & Resolution

Instant fault detection and alarm isolation for fast resolution.

Performance Monitoring & Trend Reports

Real-time link performance monitoring and report generation based on pre-configured thresholds. The entire network performance can be collected and saved from multiple links for accumulated performance and SLA compliance reports. Generate reports on an hourly, daily, weekly and monthly basis.

Web Access From Any Point

The ability to export data into a website enables easy access to information from any point at any time.

Product Highlights

- Intuitive, easy-to-use GUI
- Hierarchical network views
- Performance monitoring and trend reports
- Easy access to link and site information
- Simple interface to any SNMP device
- Supports all NetStream products family

Product Specifications

Features

Managed Links	Up to 500
Products support	NetStream Product Family, NetAstra / GSS-U
Managing Clients	1
Automatic Network Discovery	3
Hierarchical Network Views	3
Performance Monitoring and Trend Reports	3
User Access Control Management	3
SNMP Protocols v1, v2c and Secure SNMP v3	3
Support Services	Email support with ticketing system
Requirements	
Operating System	Win 7/ XP /Windows Vista / server 2008 /2003 / 2000
Min. Hardware Requirements	CPU: Intel® Core™ 2 Duo processor E7300 (3MB L2, 2.66GHz, 1066FSB) RAM: 2GB Dual Channel DDR2 SDRAM at 800MHz- 2DIMMs HD: SATA
